

Italtherm has obtained the ISO 9001 certification

We proudly announce the certification of our management system.

Only one year after its start up, Italtherm has rapidly obtained the ISO 9001, demonstrating its seriousness in the workflow management, oriented towards development and launch of products with high technological content and high environmental sustainability.

Italtherm continues its growth, reaching a new and important objective.

After closing last year balance with a positive result, launching in the market high performing products with reduced environmental impact such as [Easy Solar System](#), the first thermal solar system with zero emissions, or

[Time](#)

, the condensing boiler equipped with the innovative Acquastep system able to increase energy savings, Italtherm made another important step:

the achievement of ISO 9001 Quality Management System Certification

... and this only one year after its start up!

The certification, released by [Kiwa](#), one of the most professional companies in their field, is a further demonstration of Italtherm's seriousness and passion and of its daily commitment to develop a stronger and stronger industrial reality.

*“We are really satisfied to have achieved so rapidly the ISO 9001”, explains the Commercial Director **Pietro Giannotta**. “The certification was certainly obtained thanks to our thirty-year’s experience in the heating field, but our determination to create, day by day, a company careful to each phase of the production process and to the relationship with human resources (our real asset), has surely been the major input”*

.

Italtherm is a young company, but its staff has a thirty-year’s experience in the heating field. On the strength of its “Made in Italy” vocation, Italtherm pursues a policy of innovation, with a particular attention to renewable energies.
